Registered

Anti Piracy Registered – Standard

Key Features

- Software will function for X days (free trial period developer definable) after installation without registration
- PC clock wind back detect feature prevents free trial period being abused.
- End-user can register software at anytime using a vendor supplied Product key to generate a registration code
- Registration code is emailed to software vendor
- Software vendor emails product activation code back to end-user.
- Activation code is locked to computer and cannot be reused on other computers
- Windows XP/Vista/Windows 7 compatible
- Development kit includes: user guide, embedded security app (dll), example.

Anti Piracy Registered – Premium

- All the features of Anti Piracy Registered – Standard with the convenience of web based on line registration and product activation for end-users.

Anti-Piracy Unregistered

Protect your software against widespread piracy with an embedded security app and monitoring tool which enables copying to be detected and the software to be disabled remotely.

Unregistered

This security application follows a totally different anti piracy strategy. Allowing low level copying has been known to increase sales/uptake of software. This security app allows the vendor to track use of their software and includes a feature which enables software which has been widely copied to be remotely disabled.

Key Features

- Each copy of vendor's software is stamped with a 256 bit unique ID
- End-user can install and run software without registration.
- Security app sends a beacon via the internet (if computer is connected) to a web based monitoring tool when the software is run.
- Beacon includes unique ID of software and a key identifying the computer
- Monitoring tool tracks which computers a particular copy of the software has been installed and run on.
- Monitoring tool can reply to a beacon via the internet with a 'kill command'. This will disable only the software with a particular unique ID
- Windows XP/Vista/Windows 7 compatible.
- Development kit includes: user guide, embedded security app(dll), example

For further information and pricing for anti piracy solutions please contact Tel Trak outlining your specific requirements:

- Operating system compatibility
- Prefer product activation using a product key or monitoring tool which tracks use of the software and allows remote disabling.
- Do you distribute your software by CD/DVD disc or web download
